

Appendix:

A. *Ethical practice* means doing the right thing, at the right time, for the right reasons. *Ethics* concerns the **uncertainty** involved in making **choices** that affect other humans, either directly or via relationships and interactions - with regard to one's roles and **duties** both as a person (requiring a personal ethic) and as an employee (requiring a professional ethic). There is often, but not always, a conflict between two or more alternative choices that appear equally right, or that one feels an equal **obligation** to.
